

Dear participants of the Power Analysis Workshop,

We will have some small power analysis exercises in the workshop, so please bring your laptop along if available, and install the G*Power software beforehand. G*Power is a tool to compute statistical power analyses for many different t tests, and it is available from the University of Dusseldorf for free for both Mac and Windows. You can download the program from here:

<https://www.psychologie.hhu.de/arbeitsgruppen/allgemeine-psychologie-und-arbeitspsychologie/gpower>

See you in the workshop.
